

- "Pure energy" charging station - photovoltaic solution for charging electric vehicles
- "Energy management system" - intelligent power management and storage of charging station
- „User friendly“ application (cloud base) - covering options and data on charging stations

Innovating the future of EV charging

SminnAiBox

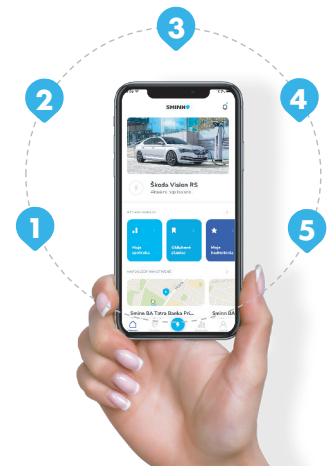

Central Communication System made by Sminn, allows connectivity of all parts of the system into One Ecosystem.

SminnInverter

Energy production is managed and optimized by the demand and priorities of each module.

SminnCharge

EV Charging Station communicates directly with Electric Vehicle and allowed working in different modes.

SminnBatt

Battery is used to store the energy from the sun and grid load. The system will make sure to charge in the lowest rate possible.
